SUMMARY

Fourth-year CS undergrad specializing in AI & ML, and a full-stack developer at heart. I love building things from scratch, and I'm most drawn to problems I've personally faced or seen people around me struggle with – turning a simple idea into something that actually helps. Comfortable across the stack, from frontend to backend to the ML models in between. proficient in DSA, system design, OOP, TypeScript, and Agile development.

EXPERIENCE

Web Development Intern – InAmigos Foundation Jun – Jul 2026

- Built and improved React components for the foundation's website as part of a 4-week internship.
- Tested REST API endpoints and helped fix bugs across frontend and backend.
- Worked with the team using Git branching and code reviews to ship small features.

PROJECTS

KrishiMind SustainAI – Agricultural Advisory Platform AMD Slingshot 2026

- Architected FastAPI + Docker backend (sub-2s inference) and deployed responsive Next.js frontend on Vercel.
- Designed 3-model ML pipeline (Random Forest + EfficientNetB0) for yield prediction, price forecasting (R^2 : 0.9635), and disease detection (28 classes, 96%+ accuracy).
- Validated REST endpoints via Postman; real-time advisory supporting 10+ crop types across multiple districts.
- Repo: [GitHub](#) — Live: [Website](#)

CookAI – Intelligent Recipe Recommendation System 2025

- Engineered scalable Node.js + Express backend with MongoDB, JWT authentication, and Gemini AI chatbot for interactive culinary assistance.
- Architected research-backed recommendation engine using TF-IDF and Cosine Similarity, with Levenshtein distance for fuzzy typo tolerance and ingredient substitutions.
- Developed responsive React.js + Vite frontend with TypeScript and Tailwind CSS, featuring real-time search, dynamic recipe scoring, and clean UI-API separation.
- Repo: [GitHub](#) — Live: [Website](#)

Smart Inventory Management AI Sparkathon 2025

- Launched React + Streamlit dashboard for real-time inventory tracking, automated restock alerts, and expiry monitoring across 54 stores and 4,100+ products.
- Trained 3-model ML pipeline (Random Forest + Logistic Regression) on 125k transactions; 87% demand accuracy and 92% expiry precision.
- Projected 30% food waste reduction and 15–20% inventory cost savings through demand forecasting and expiry-risk analysis.
- Repo: [GitHub](#) — Demo: [YouTube](#) — Live: [Website](#)

EDUCATION

2023 – 2027 **Manipal University Jaipur**, Rajasthan, India
B.Tech in Computer Science and Engineering (Specialization: AI & ML)
2023 Class 12 – Carmel Convent Sr. Sec. School, CBSE
2021 Class 10 – Carmel Convent Sr. Sec. School, CBSE

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend: React.js, Next.js, Vite, Tailwind CSS, Responsive Design, Component Architecture
Backend & APIs: FastAPI, Node.js, Express.js, REST API Design, JWT Authentication, LLM Integration
Databases: MySQL, Firebase, DBMS (Normalization, Indexing, Transactions)
DevOps & Tools: Git, Docker, Linux, Azure AI, Streamlit
CS Fundamentals: Data Structures & Algorithms, OOP, System Design, OS, Computer Networks

CERTIFICATIONS

IBM Generative AI: Introduction and Applications
Microsoft Azure AI Fundamentals (AI Services, Computer Vision)
NPTEL Design and Analysis of Algorithms, Introduction to Machine Learning, Deep Learning
Red Hat System Administration I (RH124), System Administration II (RH134)

All Certifications and Experience are available on LinkedIn
