SUMMARY

Software Engineering undergrad at Manipal University Jaipur with production experience shipping full-stack web applications, REST APIs, and containerized backends using React, Next.js, FastAPI, Flask, PostgreSQL, and Docker. Shipped a live Vercel-deployed platform, a 23-endpoint REST API with JWT auth, and a real-time dashboard processing 125k+ transactions. Solved 150+ LeetCode problems; proficient in DSA, system design, OOP, TypeScript, and Agile development.

EXPERIENCE

Web Development Intern – InAmigos Foundation

Jun - Jul 2026

- Delivered responsive React components reducing page load time by 43% for the foundation's platform.
- Tested 5+ REST API endpoints; identified and fixed bugs across frontend and backend modules.
- Completed 3+ frontend features across 4-week internship using Git branching, code reviews, and iterative testing.

PROJECTS

KrishiMind SustainAI – Agricultural Advisory Platform

AMD Slingshot 2026

- Architected FastAPI + Docker backend (sub-2s inference) and deployed responsive Next.js frontend on Vercel.
- Designed 3-model ML pipeline (Random Forest + EfficientNetB0) for yield prediction, price forecasting (R^2 : 0.9635), and disease detection (28 classes, 96%+ accuracy).
- Validated REST endpoints via Postman; real-time advisory supporting 10+ crop types across multiple districts.
- Repo: [GitHub](#) | Live: [Website](#)

CookAI – Intelligent Recipe Recommendation System

2025

- Engineered Flask + PostgreSQL backend with 23 REST APIs, JWT authentication, and Gemini Flash chatbot (10 req/60s) across 596 recipes and 10 cuisines.
- Built hybrid recommendation engine with weighted content scoring (ingredient: 0.5, cuisine: 0.3) and personalized reranking (content: 0.9, preference: 0.05).
- Implemented React + Vite frontend with ingredient search, guided cooking, and clean UI-API separation.
- Repo: [GitHub](#)

Smart Inventory Management AI

Sparkathon 2025

- Launched React + Streamlit dashboard for real-time inventory tracking, automated restock alerts, and expiry monitoring across 54 stores and 4,100+ products.
- Trained 3-model ML pipeline (Random Forest + Logistic Regression) on 125k transactions; **87% demand accuracy** and **92% expiry precision**.
- Projected **30% food waste reduction** and **15–20% inventory cost savings** through demand forecasting and expiry-risk analysis.
- Repo: [GitHub](#) | Demo: [YouTube](#)

EDUCATION

2023 – 2027	Manipal University Jaipur , Rajasthan, India B.Tech in Computer Science and Engineering (Specialization: AI & ML)
2023	Carmel Convent Sr. Sec. School (CBSE) – Class XII
2021	Carmel Convent Sr. Sec. School (CBSE) – Class X

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend: React.js, Next.js, Vite, Tailwind CSS, Responsive Design, Component Architecture
Backend & APIs: FastAPI, Flask, Node.js, REST API Design, JWT Authentication, LLM Integration
Databases: PostgreSQL, MySQL, Firebase, DBMS (Normalization, Indexing, Transactions)
DevOps & Tools: Git, Docker, Linux, Azure AI, Streamlit
CS Fundamentals: Data Structures & Algorithms, OOP, System Design, OS, Computer Networks

CERTIFICATIONS

IBM	Generative AI: Introduction and Applications
Microsoft	Azure AI Fundamentals (AI Services, Computer Vision)
NPTEL	Design and Analysis of Algorithms, Introduction to Machine Learning, Deep Learning
Red Hat	System Administration I (RH124), System Administration II (RH134)
